SCIENTIFIC COMMITTEE

Matteo Orrico

The fourth edition of the "Endograft" meeting (ENDOvascular Global Roman Arterial Featured Therapies) will place at the center of its educational activity the updating and active comparison between the players of Italian and international vascular surgery on all the innovations and the most interesting future prospects of arterial endovascular surgery.

This area of interest has the peculiarity of enjoying continuous currents of innovation, both in terms of "devices" and, above all, in terms of approach and use of these products, so much so that it is not uncommon for industries to adapt the "Instructions For Use" of their materials based on the evidence presented by the international scientific community. As in the third edition, a fundamental part of "Endograft" will include Recorded Live Cases presented by whom we believe to be the key opinion leaders in this field.

Presentation and sharing of "real world" experiences.

Indeed, this is the format that generates the most productive discussions and that really does provide something important to its participants, a "plus" to take home after attending.

Handwritten signature of Nicola Mangialardi in black ink.

Corsie Sistine

The Hospital of the Holy Spirit (Italian: L'Ospedale di Santo Spirito in Sassia), considered one of the oldest hospitals in Europe, was built to assist the poor, the sick and abandoned infants, as testified by the Safe Haven Baby Box outside the building. Pope Innocent III (1198-1216) entrusted the Templar knight Guy of Montpellier, founder of the Hospitaller Order of the Holy Spirit, to manage the hospital, and the architect Marchionne d'Arezzo to build it.

The hospital, which later took the name of Corsia Sistina (Italian for "Sixtine Aisle"), was embellished with a cycle of frescoes, commissioned by the pope himself, with the aim of narrating the moments of his life and the history of the ancient Innocentian building. The sistine lane, surmounted by a lantern, houses an altar attributed to Andrea Palladio and a pictorial work by Carlo Maratta. The marble portal known as "of Paradise" is attributed to Andrea Bregno. In the second half of the 1900s the Corsia Sistina was divided into two sections, named respectively "Sala Lancisi" and "Sala Baglivi", in memory of the illustrious doctors Giovanni Maria Lancisi (1654-1720) and Giorgio Baglivi (1668-1707). Pius V (1566-1572) expanded the hospital with the construction of the Palazzo del Commendatore (Italian for "Palace of the Knight Commander"), built by architect Giovanni Lippi (aka Nanni di Baccio Bigio) and managed by Monsignor Bernardino Cirillo. The Palace, built around an elegant quadrangular courtyard, is adorned with a fountain donated by Alexander VII (1655-1667) and a 19th-century six-hour clock commissioned by Commander Ludovico Gazzoli. The building houses the ancient Spezieria (pharmacy), the place where pharmaceutical research was conducted and medicinal herbs were ground, as nowadays testified by the collections of ancient vases and mortars.

On the main floor, the Commander's lounge overlooks the elegant loggia (balcony), magnificently decorated with frescoes, narrating the history of the ancient hospital.

Under the pontificate of Clement XI (1700-1721) the Lancisiana Library was founded by Giovanni Maria Lancisi, papal doctor and officer, for the benefit of young medical residents of the Holy Spirit Hospital. In 2003 the Lancisiana Library suffered serious structural damage, as a consequence of the damage to the Corsie Sistine; therefore, it became necessary to transfer the entire bibliographic heritage to a temporary deposit, pending restorations.

With Alexander VII (1655-1667) the hospital complex of Santo Spirito developed further, with the building of the Alessandrina hospital hall, today used as the seat of the Museum of the History of Healthcare Art. With Benedict XIV (1724-1730) it was further expanded with the construction of a third arm called "Corsia Benedictine". At the beginning of the 20th century the ancient Benedictine Lane was demolished, in favor of the arrangement of the Vittorio Bridge and the walls of the Tiber. The eastern elevation was rebuilt on the model of the ancient Sistine hospital and on the side of the Lungotevere in Sassia other buildings were added, home to the modern wards of the current Santo Spirito Hospital.

Scientific Program

13.30 Participants registration**13.55 OPENING REMARKS***N. Mangialardi***SESSION 1****Carotid Pathology**

*Moderators: G.F. Veraldi, F. Pompeo**Animators: P. Sirignano, D. Razzano*

- 14.00** Standard of practice in Italy with regard to CEA vs CAS distribution:
how did it change in the latest years

C. Setacci

- 14.07** Will latest CEA vs CAS trials change our approach to asymptomatic
carotid stenosis

G. Faggioli

- 14.14** How to improve CAS feasibility in extremely calcific carotid plaque:
actual role of IV lithotripsy

E. Cappello

- 14.21** The ideal carotid stent doesn't still exist – choice of the correct stent
for the specific patient

L. Capoccia

- 14.28** Correct management of symptomatic carotid stenosis:
urgent treatment, guidelines and real life

G. Bafile

- 14.35** Did CAS reduce the need for combined endarterectomy and
cardiac surgery

A. Esposito

- 14.42** Distal protection can always be used with the appropriate tips

*M. Lenti***14.49 Discussion**

- 15.09 LECTURE: Asymptomatic carotid stenosis –
have ACST-2 and CREST 2 answered all the questions?**

A. Halliday

CASES**Outside CME area**

- 15.24** Terumo Roadsaver – Clinical case and single center experience
N. Tusini
- 15.34** C-Guard
T. Castrucci
- 15.44** Wall stent case
M. Marino

SESSION 2
Aortic Arch

*Moderators: R. Chiesa, R. Pulli**Animators: E. Chisci, F. Marchetti*

- 15.54** Surgical debranching of the supraortic trunks still play a role and here are my indications
P. Veroux
- 16.01** Monobranched grafts have changed the approach to LZ2 repair: contemporary portfolio, limitations and advantages of available grafts
W. Mansour
- 16.08** Fenestrated Aortic Arch Repair: State of art and indications
A. L. Kahlberg
- 16.15** Retrograde branched arch graft represents an evolution of antegrade branch: how did they improve the results
P. Kasprzak
- 16.22** EndoBentall will replace Open Surgery but we are far from that: what is the state of art and what is missing in the scenario
A. Rizza
- 16.29** **Discussion**

CASES

Outside CME area

16.49 Nexus TRE – Clinical Case and single center experience*A. D'onofrio***16.59** Cook Arch Case*G. Pratesi***17.09** Terumo fenestrated Case*E. Gatta***SESSION 3****TEVAR for Aneurysms and dissections***Moderators: P. F. Veroux, G. Faggioli**Animators: F. Codispoti, E. Costantini***17.19** We still don't have the ideal thoracic endograft: unmet needs*B. Di Benedetto***17.26** Rita*V. S. Tolva***17.33** TEVAR with intentional coverage of LSA: does it come at a cost?*G. La Barbera***17.40** Type B aortic dissection and guidelines evolution:
future perspectives of the standard of practice*M. Orrico***17.47** My approach to acute thoracic dissection (almost) always include
TEVAR and treatment of complications (when present)*S. Trimarchi***17.54** Can thermal septotomy improve thoracic landing zone?*G. Pratesi***18.01** Discussion

CASES**Outside CME area**

- 18.21** Complicated Acute Type B dissection case /relay
P. Ottavi
- 18.31** TBE Gore - IMH haematoma case Ospedaliero
A. Antico
- 18.41** Lithotripsy and TEVAR case
S. Fazzini

SESSION 4**Aorto-iliac lesions: strategy, technique, and real-world results**

Moderators: S. Lepidi, G. Iacono

Animators: R. Berchiolli, L. Rizzo

- 08.30** Clinical context and decision making: claudication, CLTI, “no-option”
– practical algorithm for the aorto-iliac axis
F. Filippi
- 08.37** Imaging and planning for iliac lesions: CTA, color Doppler ultrasound, angiography, and the role of intraprocedural imaging
F. Benedetto
- 08.44** TASC C–D lesions: “endo-first” vs. open surgery
E. Ducasse
- 08.51** Reconstruction of the aorto-iliac bifurcation: Kissing stents vs. CERAB
– technique, tips, common mistakes and outcomes
P. Spath
- 08.58** Vessel preparation in calcified iliac arteries: PTA, scoring/cutting, lithotripsy, selective atherectomy – how to reduce dissections and stenting
R. Curci
- 09.05** Choice of stent in the iliac arteries: bare metal vs. covered
– indications, patency, reinterventions, and bifurcations management
F. Speziale
- 09.12** Challenging cases and bailouts: long occlusions, re-entry, hypogastric preservation, hybrid approach with common femoral artery, remote endarterectomy – complications and solutions
A. N. Giordano
- 09.19** **Discussion**

CASES**Outside CME area****09.39** Ch-CERAB case for Leriche syndrome*C. P. Dionisi***09.49** Endovascular repair of aortoiliac lesions with bifurcated graft*V. Molinari***09.59** Leriche syndrome-treatment with BMS*A. Esposito***SESSION 5****Miscellaneous**

*Moderators: L. Di Marzo**Animators: R. Borioni, N. Stella***10.09** TAVI as the treatment of choice, even for young, low-risk patients*A. Rizza***10.16** Preventive CFD and emergent cases: can it be justified*G. Melissano***10.23** The results of using a 5 branch stent graft in the treatment of patients with type IA endoleak after EVAR single center experience*W. Kuczmik***10.30** AI can predict late outcome of endovascular surgery*A. Alberti***10.37** Heart team is a must have for an high volume center and here's why*G. Tinelli***10.44** Hybrid Room – advantages and sustainability – when and how can we take the maximum advantage form it*E. C. Colacchio***10.51** Carotid Body Tumor*L. Chiche***10.58** Studio Current*G. de Donato***11.05** **Discussion**

CASES

Outside CME area

11.25 Case di rivascularizzazione con laser

G. Parlani

11.35 Case Omniflow

F. Accrocca

Break

SESSION 6

Clinical Cases - My worst nightmare

Moderators: G. de Donato, N. Mangialardi

Animators: G. Tinelli, G. Parlani

12.02 Complex target vessel catheterization in complex aortic procedures, when do desist?

M. Misuraca

12.09 Not all aortic cuffs come out with a hole (and a stent)

A. Lorido

12.16 Challenging endovascular repair of a large anastomotic pseudoaneurysm of the aortic arch after neonatal coarctation surgery

A. Di Girolamo

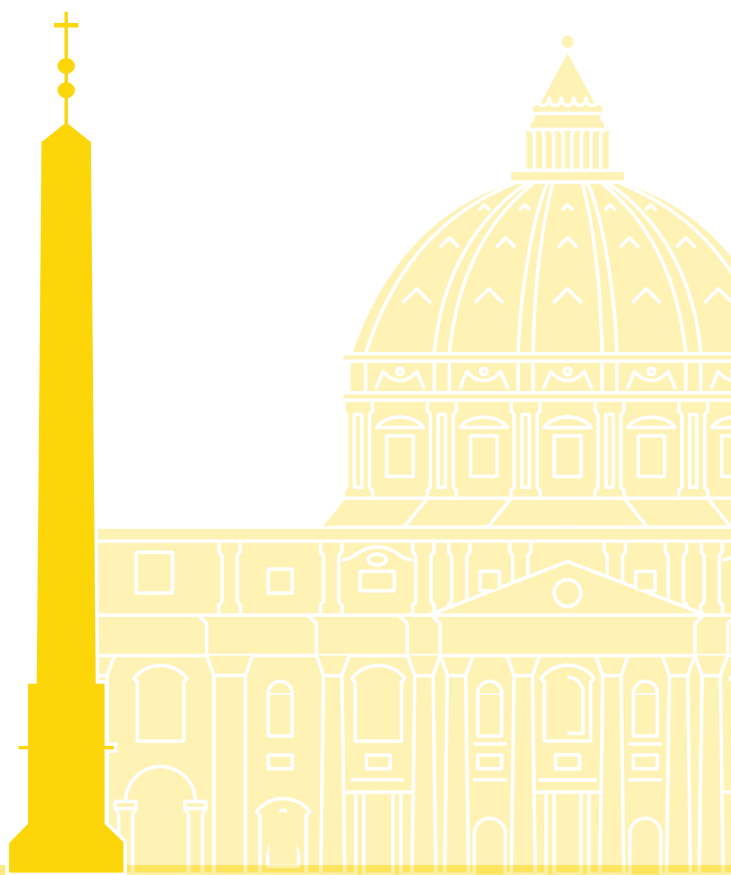

12.23 Thrombosis of the descending and abdominal aorta during TEVAR with in-situ fenestration of the left subclavian artery

M. Franchin

12.30 Closing remarks

N. Mangialardi

CME EVENT

Event ID: **486851**

ID provider: **4596**

CME Credits: **14**

Event accredited for: Cardiology, Cardiac surgery, General surgery, Thoracic surgery, Vascular surgery and Radiodiagnostics

At the end of the event, learning will be assessed through an online test.

The minimum score required to pass the test is 75%.

To take the test you must have attended at least 90% of the total number of hours indicated in the program.

Evaluation procedures

Multiple choice online questionnaire to be completed on the platform within 72 hours of the event end date:

Badges

Each participant will receive, upon registration, a badge to access the conference rooms, to be shown to the personnel in charge for CME accreditation purposes.

Certificate of attendance

In order to receive your certificate of attendance, please log in at:
