TOPICS

- Multidisciplinary approach to trauma and beyond
- Non-operative management: state of the art - on the basis of the guidelines
- EndoVascular Resuscitation and Trauma Management (EVTM) and with hybrid approach
- REBOA in trauma and beyond
- Challenging cases
- Anesthesiology point of view
- Vascular access (blinded, imaging-guided)
- Embolic portfolio (sheaths, catheters and microcatheters, embolic agents)
- Recall main interventional techniques and available technologies to be used during treatment

AIMS

The aims of the congress is to identify current treatment challenges, to share best practices, and to find consensus on controversial topics to improve patient outcomes.

Informal exchange of ideas in the more challenging areas of peripheral embolization therapies is mandatory to achieve the goals of the course.

The congress is aimed at moderate to highly trained physicians and by that sharing up to date and state of the art bleeding control methods in trauma, using endovascular and hybrid solutions. The objectives are to discuss and share: what are the possibilities, what can be done and how, how to measure and do selected bleeding control methods. What are the indications and how to select patients.

Participants and faculty members will share and discuss their cases among each other.

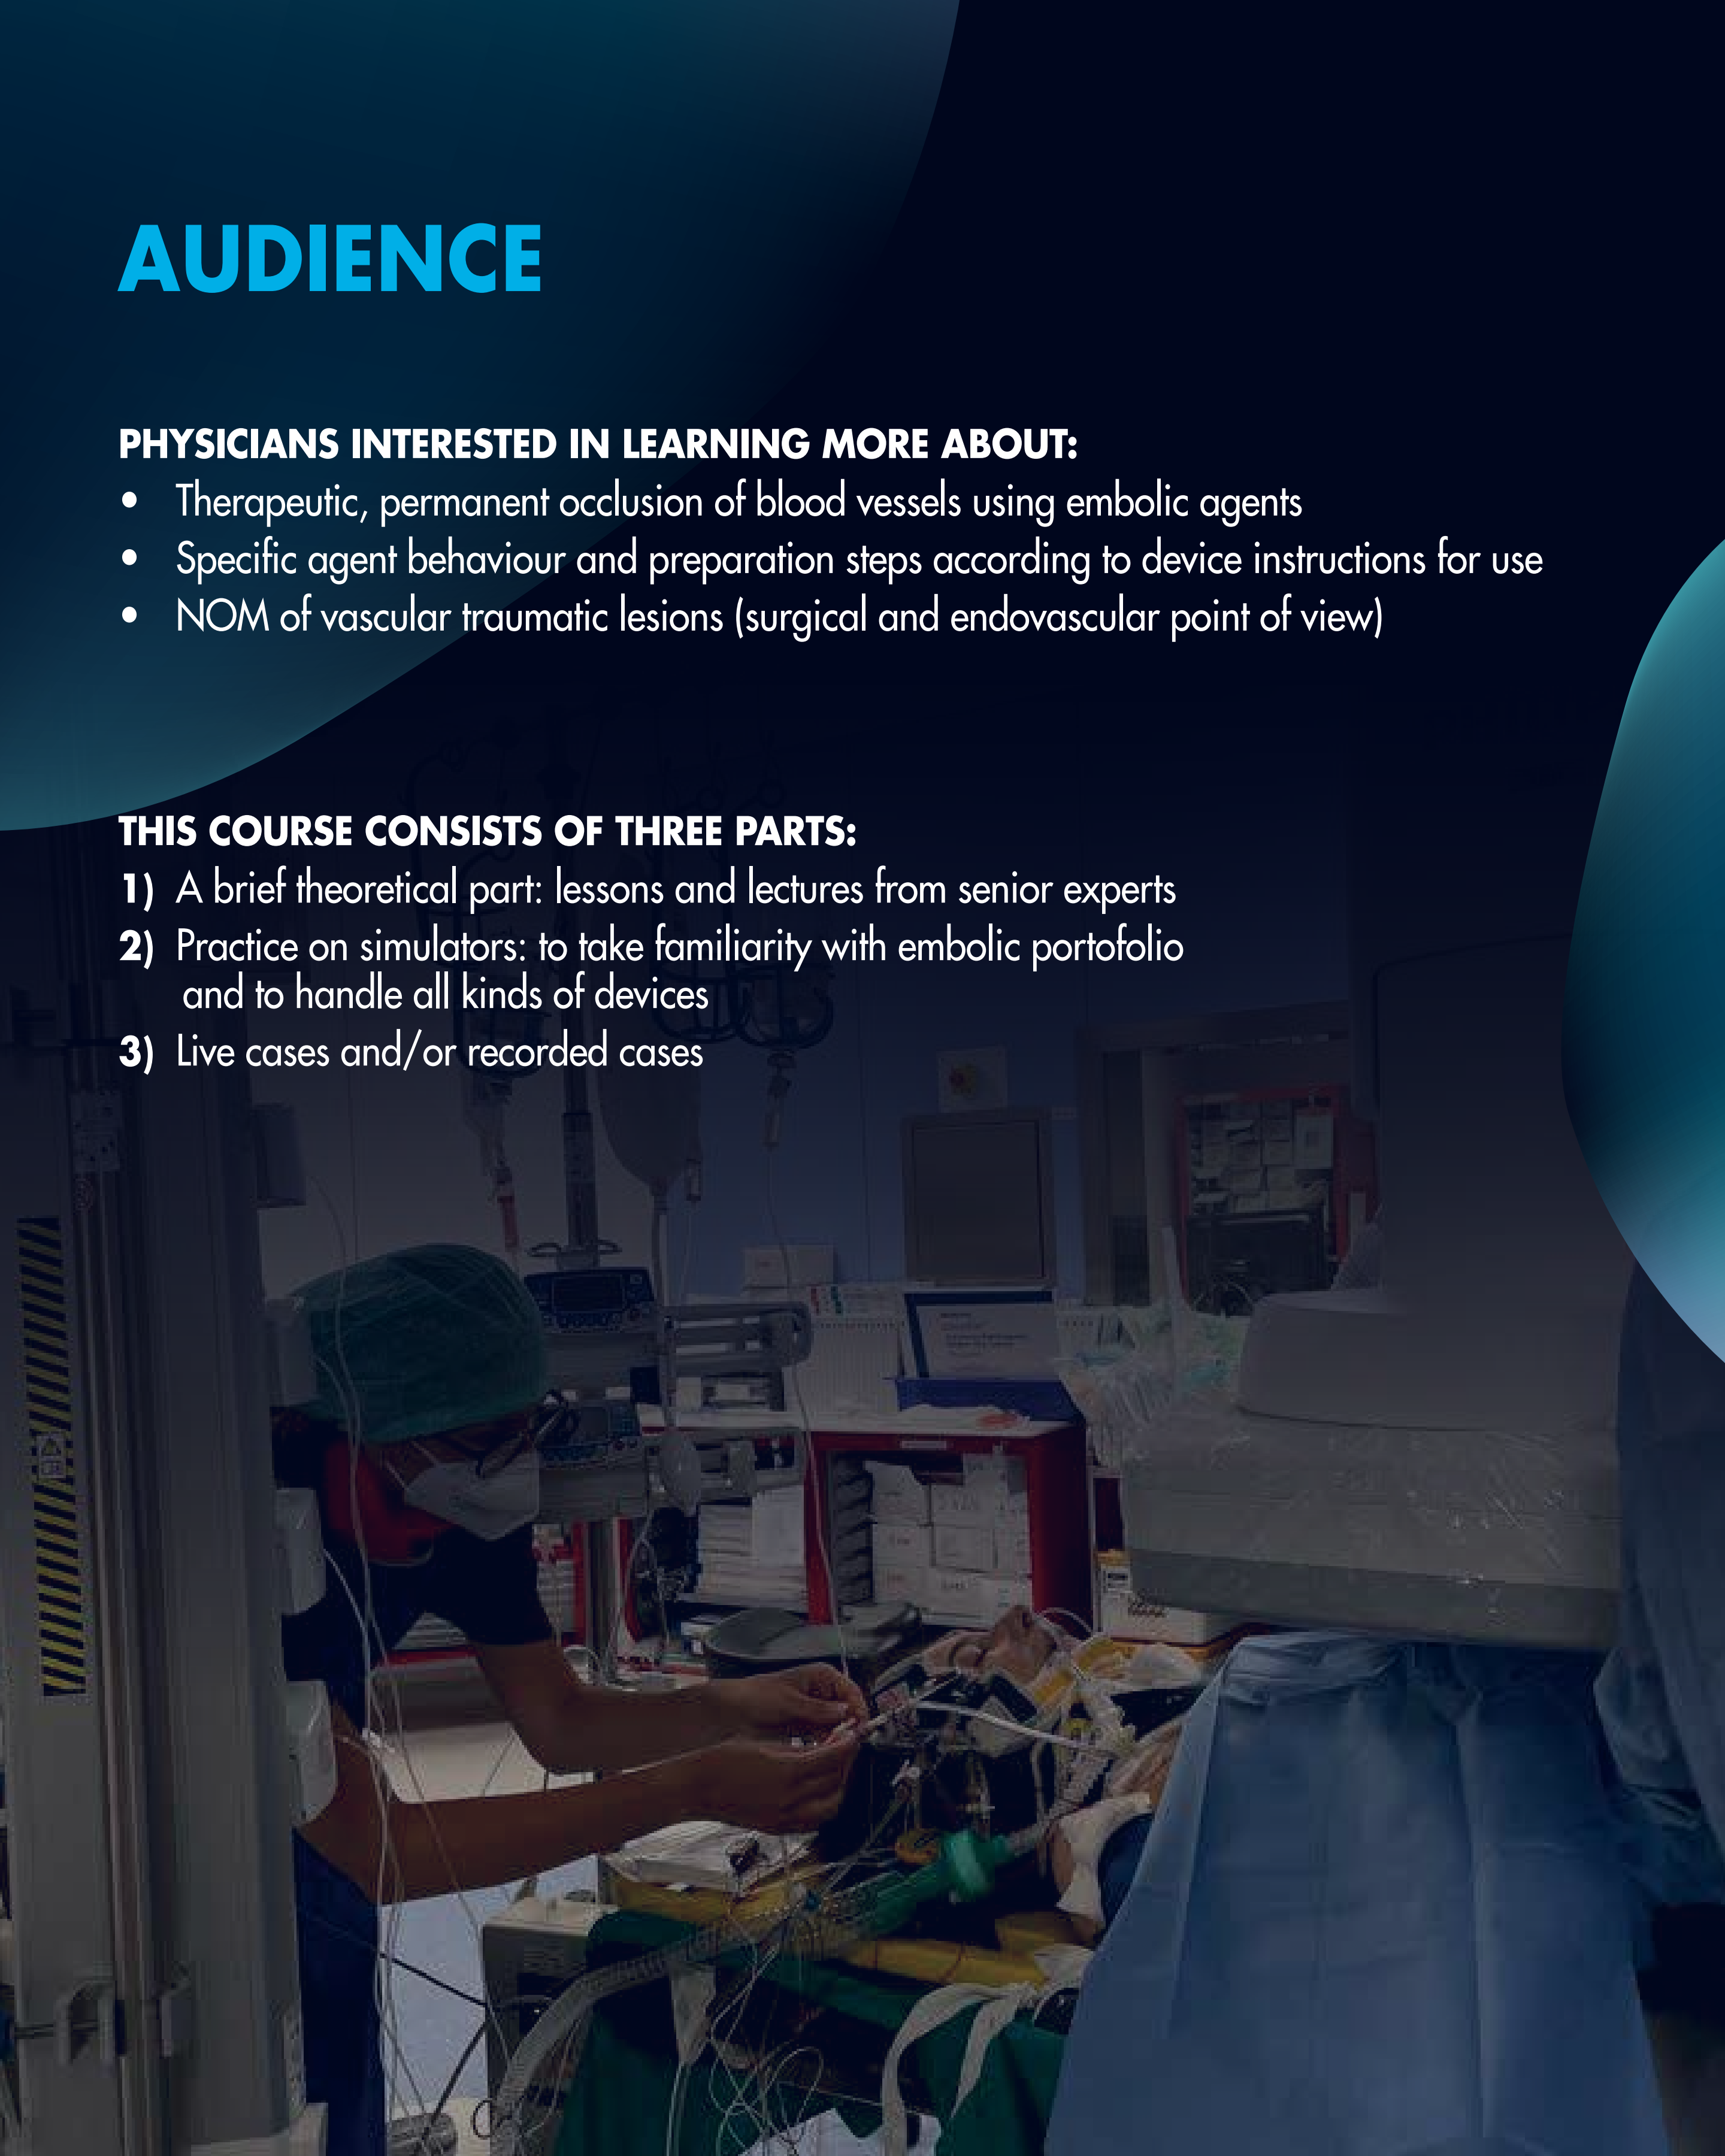

AUDIENCE

PHYSICIANS INTERESTED IN LEARNING MORE ABOUT:

- Therapeutic, permanent occlusion of blood vessels using embolic agents
- Specific agent behaviour and preparation steps according to device instructions for use
- NOM of vascular traumatic lesions (surgical and endovascular point of view)

THIS COURSE CONSISTS OF THREE PARTS:

- 1) A brief theoretical part: lessons and lectures from senior experts
- 2) Practice on simulators: to take familiarity with embolic portfolio and to handle all kinds of devices
- 3) Live cases and/or recorded cases
